- Version Control Git (keep learning)

- Graphics
- Illustration
- Photography
- Prepress
- Digital printing

Foreign Languages
English **B1**   Dutch **Treshhold 1**
(Keep learning)

SOFT SKILLS

I constantly learn relevant technologies to perform current tasks. Most of mastered and implemented skills were achieved through experience in real issues (that's why I never refuse volunteer projects).

I have positive stance to my mistakes criticism, because their fixing is part of my job.

I think that the most successful projects in the world are created by groops of people, who love their work. My actual websites were made in collaboration with Backend Developer. He had helped me with understanding of web pages structure and way of code enhancement. Actually he was the only teacher for me at that moment.

Learning process at HTML Academy was organized as a simulation of real teamwork. So I have learned way to communicate effectively with the team members and got understanding the workflow of IT company.
